PROFESSIONAL SUMMARY

Results-driven analyst with 4+ years of experience in trust & safety, risk detection, and enforcement quality across high-volume content ecosystems. Skilled at designing automated integrity systems, building audit intelligence platforms, and translating complex datasets into actionable insights that drive decision-making at scale. Strong background in SQL-based analytics, Python automation, and scalable tooling adopted by hundreds of users globally, processing millions of records with measurable gains in accuracy, efficiency, and risk coverage.

SKILLS

- Trust & Safety Analytics
- Integrity & Enforcement Quality
- Risk Detection
- Audit Design
- Compliance Validation
- SQL (Advanced)
- Amazon Redshift
- Large-Scale Data Analysis
- Python Automation
- Agent-Based Systems
- Root Cause Analysis
- Stakeholder Decision Support
- VBA
- Excel
- AWS
- ETL
- Dashboarding & Self-Serve Analytics (Amazon QuickSight)

WORK EXPERIENCE

Amazon Prime Video Trust and Safety - *Bengaluru, India*
Trust and Safety Quality Analyst | *June 2022 - Present*

Risk Detection, Audit Intelligence & Enforcement Quality

- Redesigned quality sampling and enforcement validation logic across 11 workflows, increasing detection of critical defects by 30% and strengthening audit confidence in high-volume review pipelines.
- Conducted deep root-cause analyses on false-positive and false-negative enforcement signals, directly improving sampling accuracy and decision reliability.
- Supported regulatory and compliance data requests across 3 global teams, ensuring accurate, traceable evidence under strict governance requirements.

Agent-Based Automation & Compliance Systems

- Designed and built an end-to-end agent-based automation system to replace manual Walk the Store compliance audits on the Prime Video storefront.
- Automated storefront navigation, title discovery, and playback simulation to detect on-screen maturity rating and content descriptor (MRN/CD) overlays in real time.

- Implemented screenshot capture and cloud-based processing to convert visual compliance signals into structured text evidence.
- Cross-validated extracted MRN/CD signals against internal audit systems to automatically determine pass/fail outcomes.
- Flagged mismatches, missing signals, and incorrect ratings for targeted root-cause investigation, eliminating repetitive manual reviews and improving detection reliability.
- Enabled auditors to focus on exception analysis and enforcement accuracy rather than routine navigation tasks.

Analytics, Decision Support & Stakeholder Influence

- Built centralized, self-serve quality dashboards used by 20+ managers, reducing reporting overhead and enabling faster risk-based decision-making.
- Partnered with global stakeholders to explain enforcement anomalies, performance trends, and audit outcomes using data-backed narratives.
- Translated complex SQL analyses into executive-ready insights influencing prioritization of quality and integrity initiatives.

Automation & Scalable Intelligence

- Developed Python-based analytics and monitoring tools used by 300+ employees, improving real-time visibility into data health and operational risks.
- Automated detection of pipeline failures and data inconsistencies, saving approximately 2 analyst-hours daily and improving responsiveness.
- Prototyped LLM-powered analytical tooling to generate Weekly Business Review insights directly from source tables, reducing dashboard dependency and accelerating leadership consumption of insights.

Amazon Prime Video Trust and Safety - *Bengaluru, India*

Catalog Specialist | *March 2022 - May 2022*

- Conducted content analysis and classification with 98% productivity keeping 100% quality.
- Managed sensitive corporate data in secure environment with strict governance protocols.
- Collaborated with 40+ team members on data collection, validation, and weekly reporting.

MRF - *Agra, Uttar Pradesh*

Operational Assistant | *January 2021 - March 2022*

- Produced daily MIS reports for senior leadership by analyzing operational, inventory, and sales datasets.
- Managed SAP-based operations including vendor liabilities, inventory reconciliation, and stock transfer analysis.
- Prepared statutory TDS and TCS returns, ensuring audit readiness and regulatory compliances.

KEY PROJECTS

---

1. Agent-Based Storefront Compliance Automation

Problem: Manual storefront audits were slow, inconsistent, and prone to missed compliance gaps.

Action: Built a Python-based agent system to simulate human navigation, detect MR/CD overlays during playback, capture evidence, process it via cloud services, and validate signals against internal audit records.

Impact: Eliminated repetitive manual audits, improved reliability of storefront compliance validation, and enabled focused root-cause investigations.

2. Sampling & Enforcement Signal Optimization

Problem: Existing sampling logic under-detected high-risk defects.

Action: Redesigned SQL-based detection thresholds using historical defect analysis.

Impact: Increased critical issue detection by 30%, strengthening enforcement confidence.

EDUCATION

Bachelor of Commerce - Kerala University, S.D College (CGPA: 7.1/10) | *2016 - 2019*

Tally and MS Office Certification - ICMAI Chapters Institution (Grade: A) | *2019 - 2020*
