Harikrishnan N

Business Analyst | Trust & Safety | Automation & Data Systems
harikrishnanz98@gmail.com | +91 9744754654 | https://www.linkedin.com/in/harikriz | https://harikriz.netlify.app

PROFESSIONAL SUMMARY

Results-driven Business Analyst with 5+ years of experience building risk detection frameworks, audit automation platforms, and enforcement quality systems at scale. Proven ability to thrive in ambiguous, compliance-intensive environments, delivering automated integrity solutions adopted by 250+ users globally and processing millions of records with measurable gains in accuracy, efficiency, and risk coverage.

CORE COMPETENCIES

Python | SQL | AWS (S3, Redshift, DynamoDB, CloudWatch) | Flask | VBA | ETL Pipeline Development | Risk Detection & Sampling Logic | Audit Automation | Data Analysis & Visualization | QuickSight Dashboarding | SAP | Excel | Workflow Optimization | Stakeholder Management | Internal Tool Development | AHT Modeling & Bottleneck Analysis

PROFESSIONAL EXPERIENCE

Business Analyst | Amazon Prime Video and Studios

May 2022 – Present | Bangalore

- Architected and deployed full-stack audit orchestration platform using Python, Flask, DynamoDB, and Redshift, now used by 200+ employees globally, saving 18 analyst-hours per day and reducing manual touchpoints from 30+ to 3.
- Engineered Python-based agent automation system for storefront compliance audits, integrating playback simulation, screenshot capture, and Cloud OCR processing with automated pass/fail detection logic.
- Redesigned SQL-based defect detection thresholds through historical pattern analysis, achieving 30% improvement in critical issue detection while reducing false positives in enforcement pipelines.
- Conducted deep-dive analysis on defect data across workflows, identifying recurring risk patterns and developing targeted risk-based sampling logic to surface erroneous items from large data pools.
- Built ETL pipelines to ingest and process audited data daily, creating a self-adjusting risk detection system with continuous feedback loop between audit outcomes and detection thresholds.
- Designed and maintained standardized pipeline for model outputs per organizational requirements, owning critical datasets consumed by multiple analytical teams.
- Resolved 100+ ad-hoc data requests from cross-functional stakeholders, delivering custom SQL queries, data extracts, and analytical summaries under tight deadlines.
- Developed dynamic Time and Motion Study engine with step-wise time capture, automatic AHT calculation, bottleneck discovery, and optimal vs achievable target modeling.
- Developed 3 VBA macros deployed as BAU tools across 50+ employees, saving approximately 10 hours per week and achieving 80% manual touchpoint reduction in audit workflows.
- Built live admin dashboards using QuickSight, enabling self-serve workflow visibility and tracking volumes, quality, and SLA trends for leadership reviews.

Catalog Specialist | Amazon Prime Video and Studios

March 2022 – May 2022 | Bangalore

- Conducted content analysis and classification with 98% productivity while maintaining 100% quality standards.
- Managed sensitive corporate data in secure environment with strict governance protocols.
- Collaborated with 40+ team members on data collection, validation, and weekly reporting.

Operational Assistant | MRF Limited

January 2021 – March 2022 | Agra

- Generated daily Management Information Reports by compiling and analyzing large datasets for senior management decision-making.
- Managed SAP-based operations including vendor liabilities, inventory tracking, sales analysis, and inter-office stock transfers.
- Prepared and led TDS and TCS Returns, ensuring compliance with regulatory requirements.

EDUCATION

Bachelor of Commerce | Kerala University, S.D College | *2016 – 2019* | CGPA: 7.1/10
